DETAILED ACTION

Response to Amendment

1. The double patenting rejections of record are withdrawn in response to Applicants' amendment because co-pending application is abandoned.

1.1 The prior art rejections of record are maintained.

Response to Arguments

2. Applicants' arguments have been fully considered but are not found persuasive because the Applicants' admitted prior art discloses at page 2 lines 25-27 of the specification that when syndromes are not equal to zero, then presence of error is detected.

In other words, a transformed syndrome representing a zero value is compared with incoming data syndrome. Incoming data is data that has been protected for transfer, interleaving is burst error protection.

Examiner reads the claim limitations as: data to be transferred is error protected and transferred via a channel from a source; at the reception, protected data is processed for error detection via syndrome generator to yield a received syndrome to determine presence of errors. A register containing non-erroneous syndrome code/value for comparison purposes is compared with the received syndrome. Comparison may be implemented via XOR logic wherein bit-by-bit non-erroneous syndrome code/value and bit-by-bit received syndrome cycle through said XOR logic for detection of similarity.

Examiner thus maintains that the claims in their present form do not distinguish over Applicants' admitted prior art at page 2 lines 25-27 of the specification or the prior art of record.

Clarification in the claim limitations is thus suggested.
